

NAMA : NUR HASMIZA BT ROSLAN

PROJECT NAME : LABQUEST

MATRIC NO : A211368

INSTRUCTOR NAME : MR. NELSON

Problem Statement

Science learning often relies on manual note-taking and traditional classroom activities, making it difficult for students to organize experiment records, monitor learning progress, and collaborate with peers effectively.

Problem

- Experiment notes are not centrally organized.
- Students cannot easily track completed experiments.
- Limited collaboration and knowledge sharing among students.
- Lack of quick access to science-related educational resources.

Impact

- Reduced learning engagement.
- Difficulty revising experiment findings.
- Loss of important experiment records.
- Limited peer-to-peer learning opportunities.

Proposed Solution

LabQuest addresses these challenges by providing:

- **Experiment Progress Tracking** using Room Database.
- **Science Fact Integration** through Wikipedia API.
- **Experiment Evidence Capture** using Camera Sensor integration.
- **Community Discussion Board** powered by Firebase Firestore.
- **Personal Learning Journal** for recording experiment observations.
